

In addition to the wheelchair itself, we are designing other carbon accessories to fit onto it. These include a foldable carbon water bottle cage, a retracable iPad or mobile phone holder, and more to come. In the end, our goal is to enable this carbon wheelchair to be not only a moving vehicle but also mobile working station to the disabled.

To enter into this industry and market is only a prelude for us. We want to change the market rule by offering our customers the best and affordable carbon wheelchairs. And, we are confident we will achieve this goal..

MF012/015 is made of advanced carbon fiber, which can be molded into any shape. It looks like a simple structure, but in fact is a technical marvel. Carbon fiber is an amazing material, ideal for high-load smooth, curved shape and ergonomic requirements, after years of development and the actual test, the result is to be the strongest ever and lightest wheelchair. In the past, moving stationary wheelchair is a troublesome thing, but not anymore, because MF012 /015 is the lightest wheelchair in the world, most people can easily click on by one hand.

While Gigantex is new to the medical industry, we have built a reputation as a premier carbon fiber manufacturer for over 20 years in the bicycle industry. Over the years, Gigantex has provided the bicycle industry the most innovative carbon bicycle components. For the past seven years, Gigantex has focused on developing our line of medical products, and we are proud to finally unveil our new designs.

Our goal has always been to provide the market with revolutionary products, enabling customers to improve their quality of life, and this is what we bring to the medical industry. Therefore, customers can expect Gigantex to provide the highest-quality, most affordable carbon wheelchairs on the market. In entering the market, we aim to set a new standard for excellence.

Our mission statement is:

1. Give the consumers the most affordable, strongest and lightest carbon wheelchairs in the world.
2. Our carbon wheelchairs will not only maintain the mobility to the disabled, but also improve the quality of their lives.

Following this statement, our carbon wheelchair is designed to be:

1. Less than 6 kg which is among the lightest in the market.
2. More than 1.5 times stronger than its competitors.
3. More ergonomic, with improved structural design provides the user more comfort and improved aesthetics.
4. Most importantly, it is only 1/4 to 1/3 the price of competing carbon wheelchairs.
